summaries

Database PIR\_68:\* pir1:\*

pir2;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

glucan 1.4-alpha-glucosidase (EC 3.2.1.3) - yeast (Saccharomyces cerevisiae)
W.Alternate names: extracellular glucoamylase; mucin-like protein MUC1; protein YIRO1
; Species: Saccharomyces cerevisiae
C.Date: 10-Sep-1999 #sequence\_revisian
C.Paccession: S48478
R.Rowley, K.

R.Rowley, K.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Note: undetermined tyrosine residues in the carboxyl-terminal non-repetitive region and C; Comment: This protein is length polymorphic. Individuals may have between 21 and 125 c partial repeats. The repeat shown is defined by Smai nuclease sites.
C; Comment: Serine and threonine residues in the tandem repeat domain are extensively gly C; Comment: For an alternative splice form without a tandem repeat domain, see PIR:S48146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polymorphis

TISSUE SPECIFICITY: PRODUCED BY THE BYSSAL GLAND.

DOMAIN: ALMOST EXCLUSIVELY COMPOSED OF REPEATS OF A DECAPEPTIDE.

PUM: THE DECAPEPTIDE A-K-P-S-Y-P-T-Y-K IS POST-TRANSLATIONALLY

MODIFIED AS FOLLOWING: THE SIXTH AND SEVENTH RESIDUES ARE

HYDROXYLATED AND THE PENULTIMATE IS A 3,4-DIHYDROXYPHENYLALANINE

(DOPA) DERIVED FROM TYROSINE.

-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN, EXCLUSIVELY ON THE APICAL REGION OF THE SPERM HEAD (BY SIMILARITY).
-!- TISSUE SPECIFICITY: IN TESTIS: PRIMARLLY IN HAPLOID SPERMATIDS.
-!- DOMAIN: THE MAM DOMAINS PROBABLY MEDIATE SPERM ADHESION TO THE ZONA PELLUCIDA.
-!- DOMAIN: DURING SPERM MIGRATION THROUGH THE REPRODUCTIVE TRACTS, THE MUCIN-LIKE DOMAIN MIGHT INHIBIT INAPPROPRIATE TRAPPING OF SPERMATOZOA OR PROMOTING ADHESION TO THE OYLDUCTAL ISTHMUS.
-!- DOMAIN: THE WYED DOMAINS 2 AND 3 MAY MEDIATE COVALENT OLIGOMERIZATION (BY SIMILARITY TO HUMAN INTESTINAL MUCIN MUC2).
-!- SIMILARITY: CONTAINS 3.5 MAM DOMAINS.
                                                                                                              zonadhesin gene (ZAN).";
Genomics 41:119-122(1997).
-!- FUNCTION: BINDS IN A SPECIES-SPECIFIC MANNER TO THE ZONA PELLUCIDA
OF THE EGG. MAY BE INVOLVED IN GAMETE RECOGNITION AND/OR
SIGNALING.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       REPEATS (APPROXIMATE)

- FUNCTION: NEUROFILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M, AND H WHITCH ARE INVOLVED IN THE MAINTENANCE OF NEURONAL CALIBER.

NF-H HAS AN IMPORTANT FUNCTION IN MATURE AXONS THAT IS NOT SUBSERVED BY THE TWO SMALLER NF PROTEINS.

- PTM: THERE ARE A NUMBER OF REPEATS OF THE TRIPEPTIDE K-S-P, NEH IS PHOSPHORYLATED ON A NUMBER OF THE SERINES IN THIS MOTIF. IT IS THOUGHT THAT PHOSPHORYLATION OF NFH RESULTS IN THE FORMATION OF INTERFILEMENT CROSS BRIDGES THAT ARE IMPORTANT IN THE MAINTENANCE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        OF AXONAL CALIBER.
PTM: PHOSPHORYLATION SEEMS TO PLAY A MAJOR ROLE IN THE FUNCTIONING
OF THE LARGER NEUROFILAMENT POLYPEPTIDES (NF-M AND NF-H), THE
LEVELS OF PHOSPHORYLATION BEING ALTERED DEVELOPMENTALLY AND
COINCIDENT WITH A CHANGE IN THE NEUROFILAMENT FUNCTION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE-89089138; PubMed-3145094; Shneidman P.S., Carden M.J., Lees J.F., Lazzarini R.A.; "The structure of the largest murine neurofilament protein (NF-H) as revealed by cDNA and genomic sequences."; Eaven Res. 464:217-231(1988).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIMILARITY: BELONGS TO THE INTERMEDIATE FILAMENT FAMILY.

FUNCTION: COULD BE INVOLVED IN DEFENSE AGAINST MICROBIAL INFECTIONS. PROTECTS THE EPITHELIA FROM EXTERNAL ENVIRONMENT. SUBCELLUAR LOCATION: SECRETED.
ALTERNATIVE PRODUCTS: A NUMBER OF DIFFERENT FORMS OF THE PROTEIN MAY BE PRODUCED BY ALTERNATIVE SPLICING.
FISSUE SPECIFICITY: SKIN.
PIM: EXTENSIVELY O-GLYCOSYLATED.
SIMILARITY: CONTAINS 6 P-TYPE (TREVOL) DOMAINS.

-1 SUBDATT: RNA POLYMERASE II CONSISTS OF 12 DIFFERENT SUBUNITS.

-1 SUBDATT:

-1 SUBCELLULAR LOCATION: NUCLEAR.

-1 PIT SHORDEN TO RESIDIES REPEATS CAN BE HIGHLY PHOSPHORYLATED.

-1 PITE PHOSPHORYLATION ACTIVATES POLZ.

-1 PHE PHOSPHORYLATION ACTIVATES POLZ.

-1 MISCELLANDOUS: THREE DISTINCT ZINC-CONTAINING RNA POLYMERASES ARE FOUND IN EUKARYOTIC NUCLEI: POLYMERASE I FOR THE RIBOSOMAL RNA PRECURSOK, POLYMERASE II FOR THE MRNA PRECURSOK, AND PARABES II FOR THE MRNA PRECURSOK, AND TRNA GENES.

-1 SIMILARITY: BELONGS TO THE RNA POLYMERASE BETA' CHAIN FAMILY.
                                                                                                                                                                                                                              SEQUENCE FROM N.A.

Natl. Acad. Sci. U.S.A. 86:2463-2467(1989).
FUNCTION: NEUROFILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M, AND H WHICH ARE INVOLVED IN THE MAINTENANCE OF NEURONAL CALIBER.
NF-H HAS AN IMPORTANT FUNCTION IN MATURE AXONS THAT IS NOT SUBSERVED BY THE TWO SMALLER NF PROTEINS.
                                                                                                                                                                                                     PAPTTPKETAPTTPKEP--APTTPKKPAPTTPETPPPTTSEVSTPTTKEPTTIHKSPDE 700
